

Say..

**Goodbye to Black Mould**  
**Goodbye to Condensation**

A simple, inexpensive, proven system to prevent or eliminate black mould and condensation problems in domestic properties.

gentle positive ventilation will provide a whole house solution to indoor air quality by cleaning and regenerating the air visibly reducing moisture levels and other airborne contaminants

*The Difference is Visible!*

**SOVEREIGN**  
*ConCure*  
20/20

**The Intelligent Electronic Controller**

**Assess the house size – set the unit to medium or large property – the controller does the rest **AUTOMATICALLY!** For small or extra large applications there are also Trickle and Boost modes.**

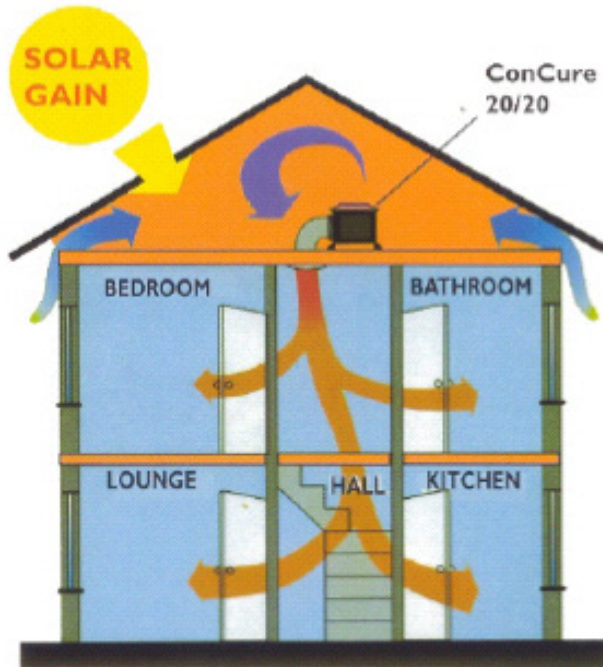

*Superior long life filter for 5 years, zero maintenance*

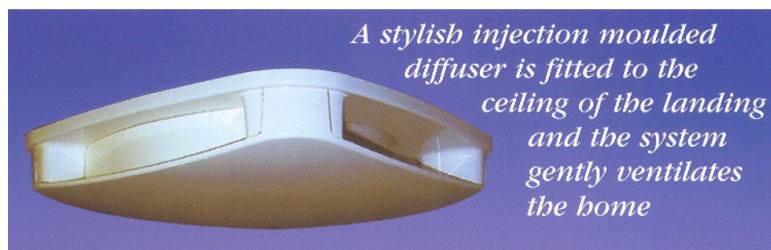

*Positive ventilation into house via unique innovative diffuser*

**Sovereign ConCure 20/20**  
 Keeps the relative humidity below 70%, effectively preventing condensation occurring and the growth of black mould.

- For holiday homes that are unoccupied for long periods, or
- For modern homes with reduced ventilation caused by double glazing, or where
- Stale humid air is trapped resulting in mildew, musty smells and streaming windows, then **ConCure 20/20** is the answer.

Positioned in the loft above the landing or the central hallway of a bungalow, the system takes maximum advantage of solar gain.

- Installed by fully trained and qualified electricians.
- 5 years parts and labour guarantee.
- Highly effective and energy efficient.
- Intelligent Visual LED displays the status of the equipment.
- Integral air filtration with 5 year zero maintenance.
- Intrinsically safe heater.

In winter months, when the problems of condensation are at their worst, most ventilation systems and extraction fans are switched off because they introduce cold air into the property. Similarly opening windows will lose residual heat and leave a property vulnerable to unforced entry. Only the **Sovereign ConCure 20/20** system with its unique, intrinsically safe heater will automatically resolve this problem by gently warming the air which is being circulated.

By incorporating the latest fan design improvements and sophisticated electronics, the resultant running costs are a miserly 1p per day rising to approximately 10p per day using the heater in cold spells.

In taking the responsible long term view of costs, the **Sovereign ConCure 20/20** system is the logical answer and one that will stand up to the most rigorous financial scrutiny.

### Assessments

For sales or a free condensation assessment contact Sovereign Chemicals Ltd on:-Tel 0845 603 0722 Fax 01229 840870 E-Mail sales@sovchem.co.uk
